Continuous Time Convolution:

1. Solve the following for $\mathrm{y}(\mathrm{t})=\mathrm{x}(\mathrm{t}) * \mathrm{~h}(\mathrm{t})$
$\mathrm{x}(\mathrm{t})=\mathrm{u}(\mathrm{t})-\mathrm{u}(\mathrm{t}-4) ; \mathrm{h}(\mathrm{t})=\mathrm{r}(\mathrm{t})$
2. Convolve the following:

3. Find the response of a system to an input of $x(t)=2 u(t-10)$ if $h(t)=\sin (2 t) u(t)$.
4. A linear time invariant system has the following impulse response:

$$
\mathrm{h}(\mathrm{t})=2 \mathrm{e}^{-\mathrm{at}} \mathrm{u}(\mathrm{t})
$$

Use convolution to find the response $y(t)$ to the following input:

$$
\mathrm{x}(\mathrm{t})=\mathrm{u}(\mathrm{t})-\mathrm{u}(\mathrm{t}-4)
$$

Sketch $\mathrm{y}(\mathrm{t})$ for the case when $\mathrm{a}=1$.
5. Determine $y(t)=x(t) * h(t)$ where $x(t)=u(t)$ and

6. Compute $\mathrm{x}(\mathrm{t}) * \mathrm{v}(\mathrm{t})$
